Title: The resting and the restless immunological memory: Its role in immunity and chronic inflammation

T cell memory: T cell memory is not what you see in blood. Long term memory to systemic pathogens and vaccines is hidden in the bone marrow. The "sleeping beauty" concept of memory maintenance: mesenchymal stromal cells organize memory. Impacts on understanding immunity and designing vaccines.

Time: Tuesday, June 21st, 11:00-12:00

Location: Landspítali, Hringsalur
